=== SECURESCAN Report ===
Target: http://testphp.vulnweb.com
Generated: 2026-10-25T16:49:21.306287

=== Server Headers ===
No headers.

=== Security Headers Check ===
X-Frame-Options: Missing - Helps prevent clickjacking
Content-Security-Policy: Missing - Prevents script injection
Strict-Transport-Security: Missing - Forces HTTPS
X-Content-Type-Options: Missing - Prevents MIME-sniffing
Referrer-Policy: Missing - Controls referrer header information

=== Discovered Paths ===
None found from wordlist.

=== Crawled URLs ===

=== Parameter Map ===

=== Safe Auto Scan Results ===
No automatic findings.

=== Subdomains ===

=== Banners (common ports) ===
Port 80: none
Port 443: none
Port 8080: none
Port 22: none

=== Open Ports ===
None detected (from common ports list).

=== TLS Info ===
TLS handshake failed or non-HTTPS.

=== Risk & Threat Meter ===
Score: 35 Classification: Medium
Reasons:
 - Missing security headers (5) — add HSTS, CSP, X-Frame-Options, X-Content-Type-Options
 - No TLS / HTTPS or TLS handshake failed (use HTTPS).

Why these matter:
 - Missing headers allow clickjacking, XSS or content sniffing attacks.
 - No TLS — data may be intercepted in transit.
